

D6571 Two-in Eight-out Audio Signal Distributor

Features

- Two-in eight-out audio matrix
- Mono or stereo signal input, eight output for mono input, four output for stereo input
- Individual volume adjustment of input and output signal in each channel
- Independent on/off control of output in each channel
- Support all-on and all-off of output in all channels

Specification

Item	Parameter
Balanced input	500mV (±100mV)
Balanced output	70V2000mV (±200mV)
Frequency response	20Hz-20kHz (±3dB)
Mono input	100Ω, 1V (0dBV)CHA or CHB input connect with CH1---CH8 output
Stereo input	CHA input connect with CH1---CH4 output
CHB input	40Hz-16kHz (±3dB) connect with CH5---CH8 output
SNR	>80dB
Crosstalk attenuation	>80dB
	>80dB
Protection	AC fuse×1
Power	AC 220-240V/50-60Hz
Size(L×W×H)	Net weight
